

AIRFLOW STEPS

<https://killercoda.com/playgrounds/scenario/ubuntu>

First click the link and go to the page

Put the following commands

1.docker run -d -p 8080:8080 --name airflow apache/airflow standalone

2.docker ps

3.docker logs airflow

4. Here copy the Password for user 'admin': XqvuePGQuyQdCQyP given (it may varies time to time)

5.press the 3 bar in right top corner

6.click traffic ports

7. It will show ports press port 8080 .

8. It will open new page airflow put the user name and its password copied

9. Airflow dashboard is openend

10. Put this command in the same cmd window. docker exec -it airflow bash

11.cd /opt/airflow/dags

12.cat > first_dag.py

13.put the content

```
from airflow import DAG
from airflow.operators.python import PythonOperator
from datetime import datetime
```

```
def task1_function():
    print("Task 1 Started")
```

```
def task2_function():
    print("Task 2 Running")
```

```

def task3_function():
    print("Task 3 Completed")

with DAG(
    dag_id="first_training_dag",

    start_date=datetime(2025, 1, 1),

    schedule="@daily",

    catchup=False,

    tags=["training"]

) as dag:

    task1 = PythonOperator(
        task_id="task1",

        python_callable=task1_function
    )

    task2 = PythonOperator(
        task_id="task2",

        python_callable=task2_function
    )

    task3 = PythonOperator(
        task_id="task3",

        python_callable=task3_function
    )

    task1 >> task2 >> task3

```

14. Now press enter and ctrl + D

15 . put command ls

16. If successful it shows first_dag.py

17. Type command exit

18. docker restart airflow

19. Go to the airflow page that already opened wait for 2 minutes then refresh it

20. After that left side click Dags it shows 1 dag = first training dag

21. In right side there will be a play button called trigger . click it shows option trigger press it
.

22. Dag will be run successfully.
